The Fintech Lending OPERATING SYSTEM

LendFoundry is an accelerator for digital lending, providing end-to-end lending solutions covering loan origination, marketing, acquisition, underwriting, loan servicing and beyond.

Welcome to LendFoundry: The Fintech OS

The LendFoundry operating system empowers digital lenders to bypass costly tech build-outs, minimize IT infrastructure, and accelerate growth.

LendFoundry provides all of the tools lenders need to be successful, including many built-in accelerators such as the Loan Origination System (LOS) and the Loan Management System (LMS). The LOS tracks a loan from application to approval, while the LMS tracks funding to servicing cycles. Along with these core functions, LendFoundry accelerators facilitate customer management, compliance reporting, authentication & security, marketing, and enable retrieval of all loan details through a unified search function.

Built to serve digital lending, LendFoundry is now the trusted platform of choice, from start-ups to enterprises, including some of today's largest online digital lending companies.

Modules
- Loan Origination
- Loan Management
- Credit Bureau Integration
- Borrower Portal
- Built in Analytics
- Broker Portal

LendFoundry's Edge

Scalability - By rendering the platform on cloud which can be easily scaled to suit the varying needs of clients.

Simplicity - Through pre-packaged integrations with credit bureaus, bank data providers, document handlers and marketing applications.

Intelligence - With built in analytics engine which assesses credit worthiness while churning data from multitude sources.
