

Digitize Your Loan Servicing with the Technology that Powers Netflix and Amazon

Loan servicing is a cost and effort sensitive process. Technology can transform loan servicing into a revenue center. LendFoundry Loan Management Solution (LMS) is built on cloud technology and microservices architecture, similar tech stack as used by Netflix and Amazon. Our SaaS model minimizes the upfront, startup cost, while the AI-enabled platform identifies priority accounts. Saving you cost and efforts at every single activity under loan servicing.

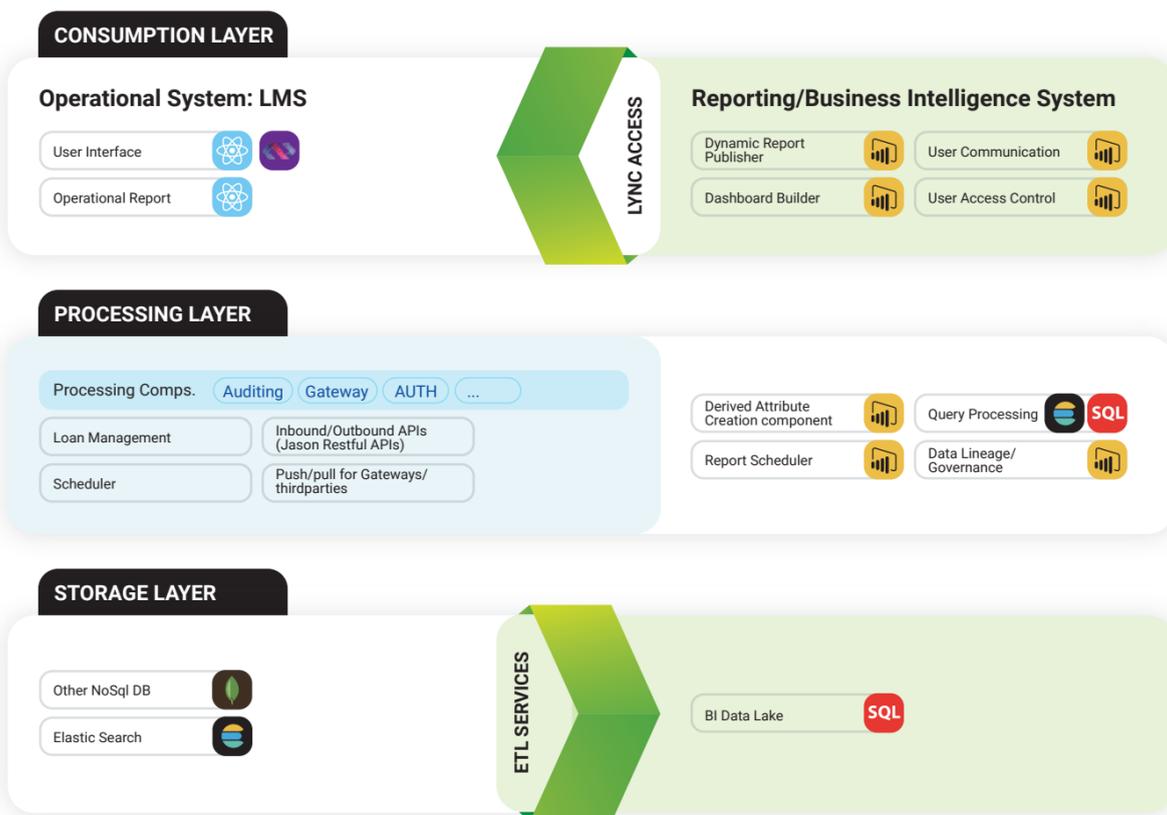

AI-powered Automation + Modular Architecture

Platform that is Loved by Your Teams

AI automation programs help your operations team in identifying accounts that need immediate attention. It covers you for risks as you can identify potential churns and delinquencies. It also helps ascertain best interest rates or term plans, helping you grow business and customer retention. Furthermore, the self-service portal makes data and computation available at your click. Built on MongoDB, it makes storage and retrieval super easy and programmable. Making it super smooth for your operations team to run account level analysis, manage portfolios, and report delinquencies.

The microservice architecture ensures a seamless integration with your existing and future technology environment. The modular architecture gives you flexibility to add new capabilities effortlessly and quickly. As it is built using Open APIs, it enables your IT team to roll out role-based access and ensure compliance with the latest security protocols. Enough reasons for your operations and IT teams to fall in love with LendFoundry.

Tech Stack that Digitizes your Loan Servicing

Features that Wow Your Employees
